

## CES Safety TPU Clipsele Antibacterial Apron

### Descriptions

- Ideal for the meat and food processing industry
- Resistant to animal oils and fats
- Adjustable to all users, with eyelets and double claps to ensure replaceable
- Extremely hygienic, pore-free surface
- No textile base, with flexible and lightweight material

### Special Characteristics

- Tested and approved by:INTERTEK TESTING COMPANY
- Actively antibacterial and fungicide:Not only slows down bacteria and fungus growth rated but also actively kills them
- Perfect hygiene thanks to mirror-smooth and pore-free surfaces
- Extremely tearproof and elastic:Far superior to rubbers
- In various thicknesses,lengths and widths
- Making special order,any aprons with your logo on request

### TPU Physical Properties

- **Abrasion Resistant Parts** made of polyurethane will often outwear other materials by a margin of 50/1 when severe abrasion is a factor. It has been proven to be vastly superior to rubber plastics and metal in many applications.
- **Load Bearing Capacity** Polyurethane has a higher load-bearing capacity than any conventional rubber. Because of this characteristic,it is an ideal material for load wheels,heavy duty couplings, metal-forming pads,shock pads,expansion joints and machine mounts.
- **Oil & Solvent Resistant** Polyurethane has excellent resistance to oils,solvents,fats,greases and gasoline.
- **Weather Resistant** Polyurethane has outstanding resistance to oxygen,ozone,sunlight,general weather conditions.
- **Temperature Resistant** Continuous use above 225°F is not recommended nor is urethane recommended in hot water over 175°F. At low temperatures,polyurethane will remain flexible down to -40°F. Gradual stiffening will occur at 0°F,but will not become pronounced until much lower temperatures are obtained.
